

Marvelous Mammals!

The striped skunk sprays a stinky odor to protect itself. It lets predators know it's going to spray by hissing, stopping its feet and finally raising its fluffy tail!

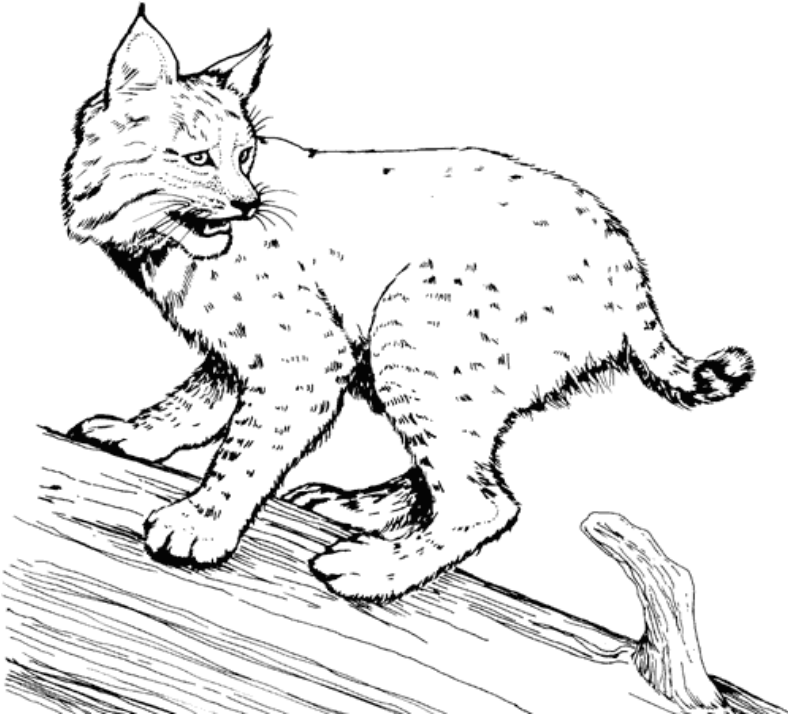

Color in this skunk in its forest habitat!

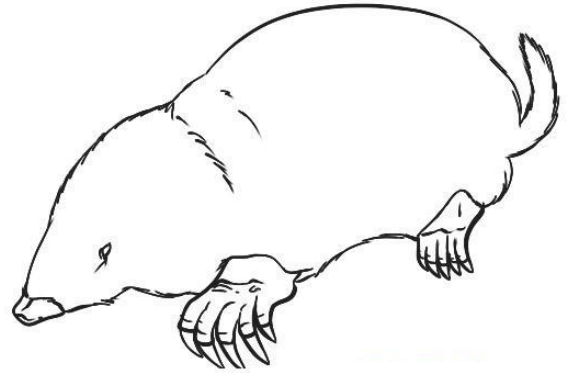

Marvelous Mammals

WildCare brought so many different kinds of mammals that all live here in California! Can you color the animals to look just like how you saw them during the visit?

Bobcats are wild cats that are great hunters. They are light brown with dark spots on their back.

Broad-Footed Moles live underground and have huge front claws for digging. Their short dark fur is extremely soft!

Bats are the only mammals that can really fly! The **Little Brown Bat** flies at night to catch and eat lots of mosquitoes.

Baby Black-tailed Deer have small white spots on their back. The spots help the baby deer hide on the forest floor.
